From decisions to experiments.

A persistent founder workspace with a transparent 30-day action plan.

01 / OPEN THE WORKSPACE

orbit-gtm-studio.vercel.app - public synthetic demo; no login.
Open the prefilled Fieldnote profile or create a separate working copy from the welcome page.
Source: github.com/Eye172/dev-test-assignment-1 (private; reviewer access is required).

02 / FOUNDER FLOW

Start free-form or guided; read text from PDF, DOCX, PPTX or notes with visible extraction limits; confirm the profile. Save ICP, value, up to three channels, pricing and exactly three market assumptions independently. Completion is saved sections / 5, never commercial validation. Observatory, Ledger and Flow share saved data in English, Russian and Kazakh. Display preferences, a four-week board and keyboard commands adapt the workspace.

03 / AI AND EVIDENCE

Optional owner-gated OpenAI specialists interpret, research, strategize, price, plan and critique. Case-specific comparisons include direct/indirect alternatives and the current workflow, captured passages and coverage gaps. Versioned hypotheses and decisions retain counterarguments, observations and reopening conditions. An independent critic checks evidence and one bounded correction round; proposals require review before application.

04 / PLANS, DATA AND RECOVERY

Next.js, React, strict TypeScript, Zod and transactional PostgreSQL; PGlite runs the same SQL locally. Rule generation retains 8-10 current suggestions. AI plan previews reconcile old suggestions and human work against time, currency budgets and dependencies. One active plan; completed work and revisions remain historical. Idempotent creation/launch, editor recovery and private AI exports preserve work after failures.

05 / RUN AND OPERATE

Node.js 24: npm ci; copy .env.example to .env.local; npm run db:migrate; npm run db:seed; npm run dev. Production: Vercel + Neon PostgreSQL, Frankfurt. Required: DATABASE_URL, DEMO_MODE=true, TRUST_PROXY=true. Optional paid AI: OPENAI_API_KEY and AI_ACCESS_CODE, server-side only. Shared daily/run budgets, usage receipts and checkpoints bound work. See README and docs/AI-BACKEND.md.

06 / VERIFY AND INTEGRATE

Run npm run verify and npm run test:e2e. Domain/SQL, real HTTP, desktop/phone, accessibility, attachment extraction, consent and recovery checks are separate from explicitly paid live AI evaluation. See docs/RELEASE-2026-10-17.md for final evidence and limits. Anyone with a demo link can edit its synthetic profile/strategy; AI material/history is owner-gated. Commercial use requires tenant authorization. Docker is supplied; physical-device certification and private Black Orbit integration are outside this prototype.
